Section 1

MANE 3332.04

Subsection 1

Chapter 4 Content

Continuous Random Variable

- The **probability distribution** of a random variable X is a description of the set of probabilities associated with the possible values of X

- Density functions are commonly used in engineering to describe physical systems.

  pdf   versus pmf (chapter3)

- A **probability density function** $f(x)$ can be used to describe the probability distribution of a continuous random variable

3 / 42

Probability Density Function

- Notice the difference from a discrete random variable
- The formal definition of a probability density function is a function such that

  1. $f(x) \geq 0$
  2. $\int_{-\infty}^{\infty} f(x)\, dx = 1$
 3. $P(a \leq X \leq b) = \int_{a}^{b} f(x)\, dx$

Pmf

A. $f(x \geq 0)$

B. $\sum_{\text{all } y} f(x) = 1$

Probability Density Function

- Any interesting property of continuous random variables is

$$P(x_1 \leq X \leq x_2) = \quad P(x_1 < X \leq x_2) = P(x_1 \leq X < x_2)$$
$$= \quad P(x_1 < X < x_2)$$

- Does not apply to discrete random variables
- Explanation

definitely not true for Chapter 3

Same

$x_1 \leq x \leq x_2$

$x_1 < x \leq x_2$
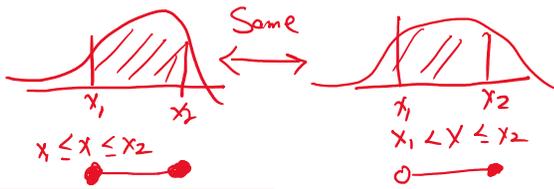

graph on the right does not include the exact value of x_1

Cumulative Distribution Function

The cumulative distribution function for a continuous random variable X is

$$F(x) = P(X \leq x) = \int_{-\infty}^{x} f(y)\, dy$$

Mean and Variance of a Continuous Random Variable

Chapter

- The mean value of a continuous random variable is defined to be

$$\mu = E(X) = \int_{-\infty}^{\infty} x f(x)\, dx \qquad N = \sum_{all\ y} x f(y)$$

- The variance of a continuous random variable is defined to be

$$\sigma^2 = V(X) = E(X - \mu)^2$$
$$= \int_{-\infty}^{\infty} (x - \mu)^2 f(x)\, dx = \int_{-\infty}^{\infty} x^2 f(x)\, dx - \mu^2$$

- The standard deviation of X is

$$\sigma = \sqrt{V(X)}$$

Continuous Uniform Distribution

The continuous uniform distribution is the analog of the discrete uniform distribution in that all outcomes are equally likely to occur

- A continuous uniform distribution for the random variable X has a probability density function

$$f(x) = \frac{1}{b-a}, \quad a \leq x \leq b$$
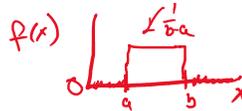

- The mean of the uniform distribution is

$$\mu = E(X) = \frac{a+b}{2}$$

- The variance of X is

$$\sigma^2 = V(X) = \frac{(b-a)^2}{}$$

$f(x)$

$\frac{1}{b-a}$

$a < x \quad f(x)=0), \quad x > b, \quad f(x)=0)$

$\int_{-\infty}^{\infty} x f(x)\,dx = \int_{-\infty}^{\infty} \left(\frac{1}{b-a}\right) x\,dx$

$= \frac{1}{b-a}\left[\int_{-\infty}^{a} x\,dx + \int_{a}^{b} x\,dx + \int_{b}^{\infty} x\,dx \right]$

$= \frac{1}{b-a} \int_{0}^{b} x\,dx$

$= \left(\frac{1}{b-a}\right) \frac{x^2}{2}\Big|_{x=a}^{b}$

$= \left(\frac{1}{b-a}\right)\left(\frac{b^2}{2} - \frac{a^2}{2}\right)$

$= \frac{1}{2}\left(\frac{1}{b-a}\right)(a+b)(a-b)$

$$f(x) = 2 \quad \text{for } 49.75 < x < 50.25$$

$$P(x > 50) = \int_{50}^{50.25} 2\,dx = 2x \Big|_{x=50}^{50.25}$$

Uniform Problem 4.1.6

- See page P-25

$$= 2(50.25 - 50) = .5$$
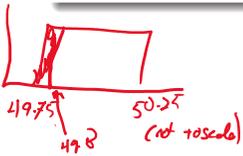

$$P(x < 49.8) = \int_{49.75}^{49.8} 2\,dx = 2x \Big|_{x=49.75}^{49.8}$$

$$= 2(49.8 - 49.75) = .1$$

49.75   50.25
49.8   (not to scale)

$$P(x < 49.8) = F(49.8)$$

$$P(x > 50) = 1 - F(50)$$

Gaussian (Gauss)

The Normal Distribution

- The normal distribution is the most widely used and important distribution in statistics.

- You must master this!

- A random variable X with probability density function

$$f(x) = \frac{1}{\sqrt{2\pi}\sigma} e^{-\frac{(x-\mu)^2}{2\sigma^2}} \quad \text{for} \quad -\infty < x < \infty$$

has a **normal distribution** with parameters μ and σ where $-\infty < \mu < \infty$ and $\sigma > 0$

$N(\mu, \sigma)$

- The normal distribution with parameters μ and σ is denoted $N(\mu, \sigma^2)$

- An interesting web-site is
  http://www.seeingstatistics.com/seeingTour/normal/shape3.html

10 / 42

given N =
σ² =

σ_1 Symmetric

$N \leftarrow$ location

$\sigma_2 < \sigma_1$

$\sigma_3 > \sigma_1$
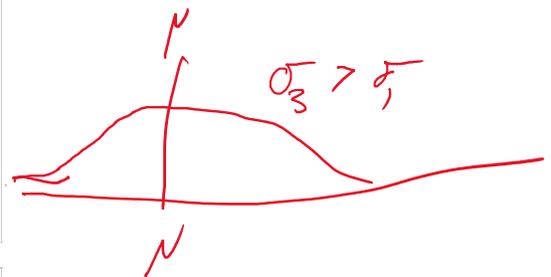

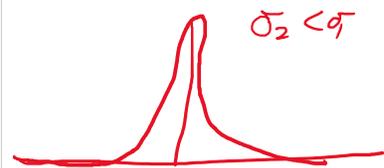

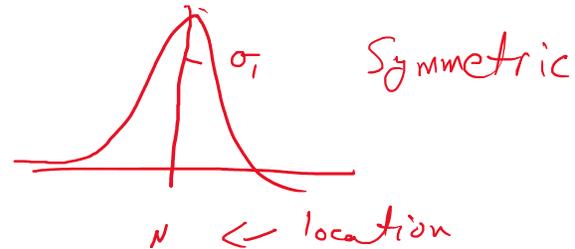

Mean and Variance of the Normal Distribution

- The mean of the normal distribution with parameters μ and σ is

$$E(X) = \mu$$

- The variance of the normal distribution with parameters μ and σ is

$$V(X) = \sigma^2$$

- The variance of the normal distribution with parameters μ and σ is

$$V(X) = \sigma^2$$

Central Limit Theorem

- Brief introduction
- States that the distribution of the average of independent random variables will tend towards a normal distribution as n gets large
- More details later

n arowel 25-30

Calculating Normal Probabilities

- Is somewhat complicated
- The difficulty is $\int_a^b f(x)\,dx$ does not have a closed form solution
- Probabilities must be found by numerical techniques (tabled values)
- It is very helpful to draw a sketch of the desired probabilities (I require this)

How to use without closed form
Solution
① Tables
② Computers

closed form
recall uniform

$$\int_a^x f(x)\,dx = \frac{X-a}{b-a}$$

answer does not contain
an integral

The Standard Normal Distribution

- A normal random variable with $\mu = 0$ and $\sigma = 1$ is called a **standard normal** random variable

- A standard normal random variable is denoted as z

- The cumulative distribution function for a standard normal is defined to be the function $F(x)$ for standard normal is $\Phi(x)$

$$\Phi(z) = P(Z \leq z) = F(z)$$

- These probabilities are contained in Appendix Table III on pages A-8 and A-9

$\mu = 0$
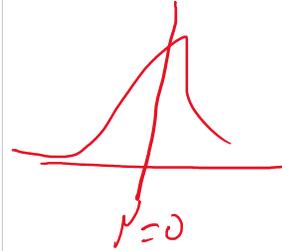

Φ — capital phi

Cumulative Standard Normal Distribution

A-6 APPENDIX A Statistical Tables and Charts

$$\Phi(z) = P(Z \le z) = \int_{-\infty}^{z} \frac{1}{\sqrt{2\pi}} e^{-\frac{1}{2}u^2}\, du$$

Standard Normal Problem

5.1.1 Suppose that $Z \sim N(0, 1)$. Find:
  (a) $P(Z \leq 1.34)$
  (b) $P(Z \geq -0.22)$
  (c) $P(-2.19 \leq Z \leq 0.43)$
  (d) $P(0.09 \leq Z \leq 1.76)$
  (e) $P(|Z| \leq 0.38)$
  (f) The value of x for which $P(Z \leq x) = 0.55$
  (g) The value of x for which $P(Z \geq x) = 0.72$
  (h) The value of x for which $P(|Z| \leq x) = 0.31$

Figure 3: image

Part a

0   1.34

$$P(Z < 1.34) = \Phi(1.34)$$
$$= .909877$$

Part b

0
-.22

$$P(Z > -.22) = 1 - F(-.22)$$
$$= 1 - \Phi(-.22)$$
$$= 1 - .412936$$
$$= .587064$$

Standard Normal Practice Problems

Normal pdf

$$f(x) = \frac{1}{\sqrt{2\pi}\,\sigma} \exp\left[-\frac{1}{2}\left(\frac{X-\mu}{\sigma}\right)^2\right]$$

$$= \frac{1}{\sqrt{2\pi}\,\sigma} e^{-\frac{1}{2}\left(\frac{X-\mu}{\sigma}\right)^2}$$

Standardizing (the z-transform)

transformation or change of variables

- Suppose X is a normal random variable with mean μ and variance σ^2

$z = \frac{X-\mu}{\sigma}$ → transforms to standard normal

$$P(X \leq x) = P\left(\frac{X-\mu}{\sigma} \leq \frac{x-\mu}{\sigma}\right) = P(Z \leq z)$$

- The z-value is $z = (x-\mu)/\sigma$

- Result allows the standard normal tables to be used to calculate probabilities for any normal distribution

Normal Probability Problem

$\mu = 10, \sigma = 2$

5.1.3 Suppose that $X \sim N(10, 2)$. Find:
  (a) $P(X \le 10.34)$
  (b) $P(X \ge 11.98)$
  (c) $P(7.67 \le X \le 9.90)$
  (d) $P(10.88 \le X \le 13.22)$
  (e) $P(|X - 10| \le 3)$
  (f) The value of x for which $P(X \le x) = 0.81$
  (g) The value of x for which $P(X \ge x) = 0.04$
  (h) The value of x for which $P(|X - 10| \ge x) = 0.63$

Figure 4: image

Data) $P(X \le 10.34)$
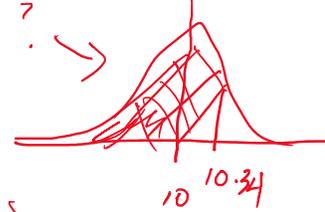

$$P(X \le 10.34) = P\left(Z < \frac{10.34 - 10}{2}\right)$$

$$= P(Z \le .17) = \Phi(.17)$$

$$= .567495$$

Normal Practice Problems

Normal Approximation to the Binomial Distribution

- If X is a binomial random variable,

$$Z = \frac{X - np}{\sqrt{np(1 - p)}}$$

is approximately a standard normal random variable. Consequently, probabilities computed from Z can be used to approximate probabilities for X

- Usually holds when

$$np > 5 \quad \text{and} \quad n(1 - p) > 5$$

Problem

4. A process yields 10% defective items. If 100 items are randomly selected from the process, what is the probability that the number of defectives

(a) exceeds 13?

(b) is less than 8?

Source: Walpole, Myers, Myers & Ye

Figure 5: image

- How good are the approximations?

Continuity Correction Factor

- Is a method to improve the accuracy of the normal approximation to the binomial
- Examine Figure 6.22 from Walpole, Myers, Myers & Ye. Note that each rectangle is centered at x and extends from $x - 0.5$ to $x + 0.5$
- This table should help formulate problems

Binomial Probability	with Correction Factor	Normal Approximation
$P(X \geq x)$	$P(X \geq x - 0.5)$	$P\left(Z > \frac{x - 0.5 - np}{\sqrt{np(1-p)}}\right)$
$P(X \leq x)$	$P(X \leq x + 0.5)$	$P\left(Z < \frac{x + 0.5 - np}{\sqrt{np(1-p)}}\right)$
$P(X = x)$	$P(x - 0.5 \leq X \leq x + 0.5)$	$P\left(\frac{x - 0.5 - np}{\sqrt{np(1-p)}} < Z < \frac{x + 0.}{\sqrt{np}}\right.$

Normal Approximation - Figure

Figure 6: image

Rework Problem using Continuity Correction Factor

- Are the approximations improved?

Normal Approximation to the Poisson Distribution

- If X is a Poisson random variable with $E(X) = \lambda$ and $V(X) = \lambda$,

$$Z = \frac{X - \lambda}{\sqrt{\lambda}}$$

is approximately a standard normal random variable.

Exponential Distribution

- The exponential distribution is widely used in the area of reliability and life-test data.
- Ostle, et. al. (1996) list the following applications of the exponential distribution
  - the number of feet between two consecutive erroneous records on a computer tape,
  - the lifetime of a component of a particular device,
  - the length of a life of a radioactive material and
  - the time to the next customer service call at a service desk

Exponential Distribution

- The PDF for an exponential distribution with parameter $\lambda > 0$ is

$$f(x) = \lambda e^{-\lambda x}, \quad \text{for } 0 \leq x < \infty$$

- The mean of X is

$$\mu = E(X) = \frac{1}{\lambda}$$

- The variance of X is

$$\sigma^2 = V(X) = \frac{1}{\lambda^2}$$

Note that other authors define $f(x) = \frac{1}{\theta} e^{-x/\theta}$. Either definition is acceptable. However one must be aware of which definition is being used.

The Exponential CDF

The CDF for the exponential distribution is easy to derive

$$
\begin{aligned}
F(x) = \quad P(X \le x) &= \int_{-\infty}^{x} \lambda e^{-\lambda y}\, dy \\
&= \int_{0}^{x} \lambda e^{-\lambda y}\, dy \\
&= \left(-e^{-\lambda y}\right)\Big|_{y=0}^{x} \\
&= -e^{-\lambda x} - (-e^{0}) \\
&= -e^{-\lambda x} + 1 \\
&= 1 - e^{-\lambda x}
\end{aligned}
$$

Problem 4-79

4-79. The time to failure (in hours) of fans in a personal computer can be modeled by an exponential distribution with $\lambda = 0.0003$.
(a) What proportion of the fans will last at least 10,000 hours?
(b) What proportion of the fans will last at most 7000 hours?

Figure 7: image

Lack of Memory Property

- The mathematical definition is

$$P(X < t_1 + t_2 | X > t_1) = P(X < t_2)$$

- That is "the probability of a failure time that is less than $t_1 + t_2$ given the failure time is greater than t_1 is the probability that the item's failure time is less than t_2
- This property is unique to the exponential distribution
- Often used to model the reliability of electronic components.

Problem 4–80

4-80.   The time between the arrival of electronic messages at your computer is exponentially distributed with a mean of two hours.

(a) What is the probability that you do not receive a message during a two-hour period?

(b) If you have not had a message in the last four hours, what is the probability that you do not receive a message in the next two hours?

(c) What is the expected time between your fifth and sixth messages?

Figure 8: image

Relationship to the Poisson Distribution

- Let Y be a Poisson random variable with parameter λ. Note: Y represents the number of occurrences per unit
- Let X be a random variable that records the time between occurrences for the same process as Y
- X has an exponential distribution with parameter λ

Lognormal Distribution

- Let W have a normal distribution with mean θ and variance ω^2; then $X = \exp(W)$ is a **lognormal random variable** with pdf

$$f(x) = \frac{1}{x\omega\sqrt{2\pi}} \exp\left[-\frac{(\ln(x) - \theta)^2}{2\omega^2}\right] \quad 0 < x < \infty$$

- The mean of X is

$$E(X) = e^{\theta + \omega^2/2}$$

- The variance of X is

$$V(X) = e^{2\theta + \omega^2}\left(e^{\omega^2} - 1\right)$$

Example Problem

3-47. Suppose that X has a lognormal distribution with parameters $\theta = 5$ and $\omega^2 = 9$. Determine the following:

(a) $P(X < 13{,}300)$
(b) The value for x such that $P(X \leq x) = 0.95$
(c) The mean and variance of X Montgomery, Runger Hubble

Figure 9: image

Gamma Distribution

- The random variable X with pdf

$$f(x) = \frac{\lambda^r x^{r-1} e^{-\lambda x}}{\Gamma(r)}, \quad \text{for } x > 0$$

is a **gamma random variable** with parameters $\lambda > 0$ and $r > 0$.

- The gamma function is

$$\Gamma(r) = \int_0^\infty x^{r-1} e^{-x} \, dx \quad \text{for } r > 0$$

with special properties:

- $\Gamma(r)$ is finite
- $\Gamma(r) = (r-1)\Gamma(r-1)$
- For any positive integer r, $\Gamma(r) = (r-1)!$

Gamma Distribution

- The mean and variance are

$$\mu = E(X) = r/\lambda \text{ and } \sigma^2 = V(X) = r/\lambda^2$$

- We will not work any probability problems using the gamma distribution

Gamma Tables

Weibull Distribution

- The random variable X with pdf

$$f(x) = \frac{\beta}{\delta} \left(\frac{x}{\delta} \right)^{\beta-1} \exp\left[-\left(\frac{x}{\delta} \right)^{\beta} \right], \quad \text{for } x > 0$$

is a **Weibull random variable** with scale parameter $\delta > 0$ and shape parameter $\beta > 0$

- The CDF for the Weibull distribution is

$$F(x) = 1 - \exp\left[-\left(\frac{x}{\delta} \right)^{\beta} \right]$$

- The mean of the Weibull distribution is

$$\mu = E(X) = \delta\Gamma\left(1 + \frac{1}{\beta} \right)$$

Weibull Problem

45. Suppose that fracture strength (MPa) of silicon nitride braze joints under certain conditions has a Weibull distribution with $\beta = 5$ and $\delta = 125$ (suggested by data in the article "Heat-Resistant Active Brazing of Silicon Nitride: Mechanical Evaluation of Braze Joints," (*Welding J.*, August 1997: 300s–304s).

   a. What proportion of such joints have a fracture strength of at most 100? Between 100 and 150?

   b. What strength value separates the weakest 50% of all joints from the strongest 50%?

   c. What strength value characterizes the weakest 5% of all joints?

Figure 11: image

Weibull Practice Problems

CDF of uniform

$$f(x) = \frac{1}{b-a} \text{ for } a < x < b$$

$$F(x) = \int_{-\infty}^{x} f(x)\,dx = \begin{cases} 0 & \text{for } x < a \\ \int_{a}^{x} \frac{1}{b-a}\,dy & \text{for } a < x < b \\ 1 & \text{for } x > b \end{cases}$$

$$\int_{a}^{x} \frac{1}{b-a}\,dy = \left(\frac{1}{b-a}\right)y\Big|_{y=a}^{x} \rightarrow \frac{x-a}{b-a}$$
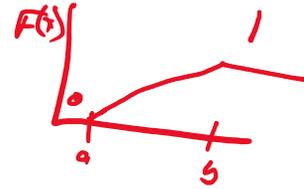

$$a = 49.75$$
$$b = 50.25$$

$$P(x > 50) = 1 - F(50)$$
$$= 1 - \frac{50 - 49.75}{50.25 - 49.75} = .5$$

Find x such that $P(Z \leq x) = 0.55$

QUESTION 1

Let Z be a standard normal random variable, find P(Z>2.65).

- ○ 0.988088
- ○ The correct answer is not provided.
- ○ 0.011912
- ○ 0.137439
- ○ 0.995975
- ○ 0.975374
- ○ 0.004025

Screen clipping taken: 3/3/2025 8:40 AM
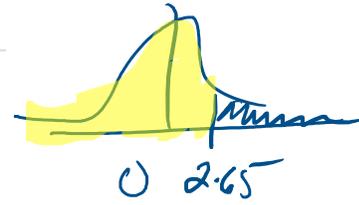

$$P(z > 2.65) = 1 - \Phi(2.65)$$
$$= 1 - .995975$$
$$= .004025$$

Standard normal pp

QUESTION 3

Let Z be a standard normal random variable, find the value z such that $P(Z>z)= 0.7825$.

○ 0.78

○ The correct answer is not provided.

○ 3.12

○ 1.07

⊘ -0.78

○ -1.07
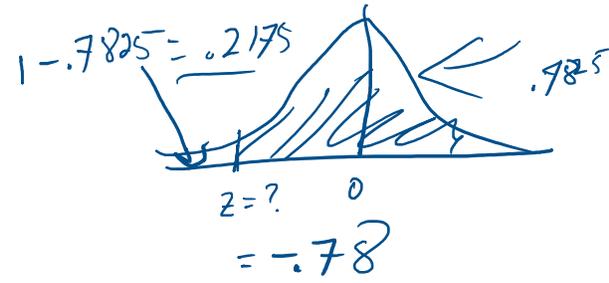

Screen clipping taken: 3/3/2025 8:43 AM

$1 - .7825 = .2175$

$z = ?$ 0

$.7825$

$= -.78$

Standard normal pp

QUESTION 5

Let Z be a standard normal random variable, find the value z such that P(Z<z)= 0.1986.

- ○ 1.29
- ○ The correct answer is not provided.
- ○ 0.85
- ○ 3.1
- ○ -1.29
- ○ **-0.85**

Screen clipping taken: 3/3/2025 8:46 AM
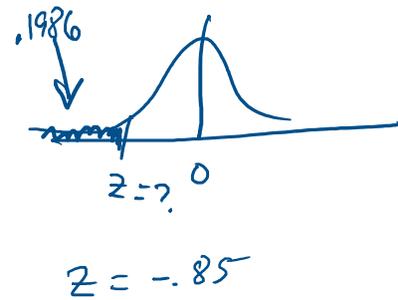

.1986

$z = ?$ 0

$z = -.85$
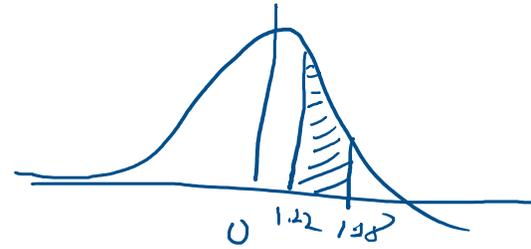

Standard normal pp

Let Z be a standard normal random variable, find P(1.22<Z<1.28).

○ 0.010959

○ -0.013696

○ The correct answer is not provided.

○ 0.100273

○ 0.888768

○ 0.989041

Screen clipping taken: 3/3/2025 8:50 AM

$$P(1.22 < Z < 1.28) = \Phi(1.28) - \Phi(1.22)$$

$$= .899727 - .888767$$

$$= .01096$$

Standard normal pp

QUESTION 9

Let Z be a standard normal random variable, find P(Z<3.07).

- ○ 0.003584
- ○ 0.996416
- ○ 0.00107
- ○ The correct answer is not provided.
- ○ 0.99893
- ○ 0.878258
- ○ 0.839243
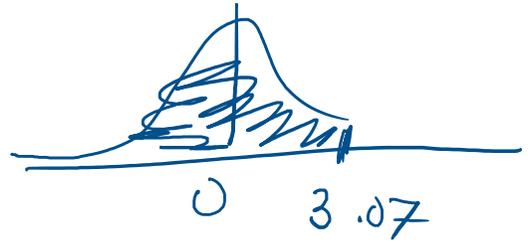

Screen clipping taken: 3/3/2025 8:56 AM

$$P(z < 3.07) = \Phi(3.07)$$
$$= .998930$$

Attendance

line 1   E)

line 2   A) March 24 , B) March 26
                Monday   Wednesday

5.1.3 part b

Find $P(X \geq 11.98)$

$$Z = \frac{X - N}{\sigma}$$
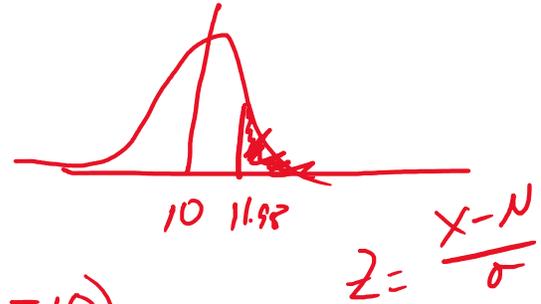

$$P(X \geq 11.98) = 1 - \Phi\left(\frac{11.98 - 10}{2}\right)$$

$$= 1 - \Phi(.99)$$

$$= 1 - .838913$$

$$= .161087$$

5.1.3 part f
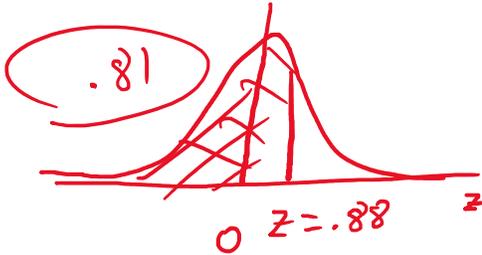

Find x s.t. $P(X \leq x) = .81$

$$Z = \frac{X - \mu}{\sigma} \rightarrow .88 = \frac{X - 10}{2}$$

$$X = 2(.88) + 10$$

$$= 11.76$$

.81

$$0 \quad Z = .88$$

5.1.3 part g

Find x s.t. $P(x \geq x) = .04$

$1 - .04 = .96$

$.04$

0 1.75 z

Step 1
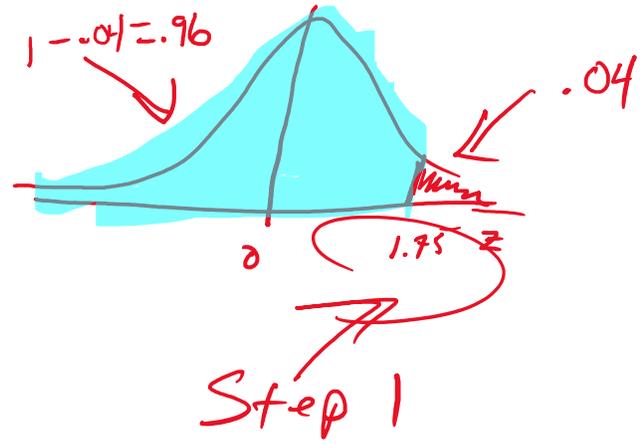

Step 2

$$Z = \frac{x - N}{\sigma} \rightarrow 1.75 = \frac{x - 10}{2}$$

$$x = 13.5$$

QUESTION 1

Let X be a normal random variable with mean (mu) = 109.97 and standard deviation (sigma)=1.054, find P(X<110.495).

○ 0.691462

○ 0.308538

○ 0.5

○ The correct answer is not provided.

○ 0.352065

○ 0.989879
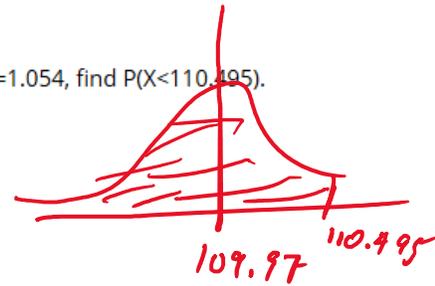

Screen clipping taken: 3/5/2025 8:27 AM

$$P(x < 110.495) = \Phi\left(\frac{110.495 - 109.97}{1.054}\right)$$

$$= \Phi(0.498)$$

$$0.50$$

$$= .691426$$

Normal pp

QUESTION 3

Let X be a normal random variable with mean (mu) = 72.616 and standard deviation (sigma) = 2.581, find the value x such that P(X<x)= 0.8608.

- ○ 75.403 ✓
- ○ -1.08
- ○ 82.94
- ○ The correct answer is not provided.
- ○ 69.829
- ○ 1.08

Screen clipping taken: 3/5/2025 8:31 AM

$.8608$

0 $X=?$ Z
        1.08

$$Z = \frac{X - \mu}{\sigma} \implies 1.08 = \frac{X - 72.616}{2.581}$$

$$X = 1.08(2.581) + 72.616$$

$$= 75.40348$$
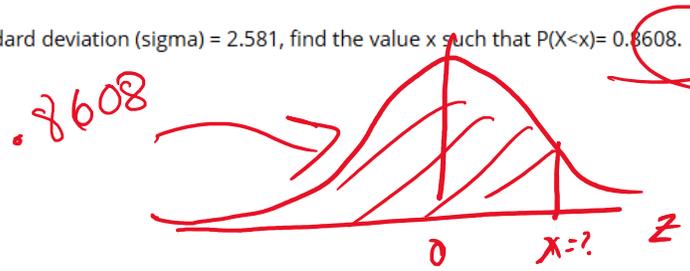

QUESTION 5

Let X be a normal random variable with mean (mu) = 119.244 and standard deviation (sigma)=1.872, find P(X>117.197).

○ The correct answer is not provided.

○ 0.841345

○ 0.066844

○ 0.220251

○ 0.862143

○ 0.137857
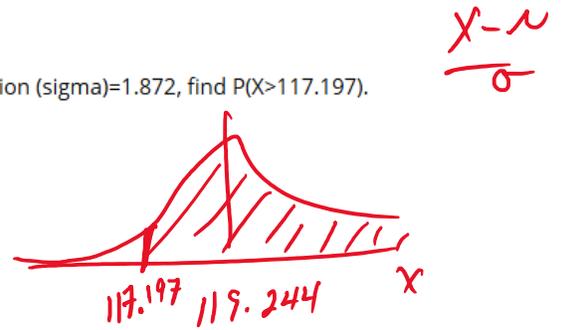

Screen clipping taken: 3/5/2025 8:36 AM

$$\frac{X - \mu}{\sigma}$$

$$P(x > 117.197) = 1 - \Phi\left(\frac{117.197 - 119.244}{1.872}\right)$$

$$= 1 - \Phi(-1.09)$$

$$= 1 - .137857$$

$$= .862143$$

Normal pp

QUESTION 7

Let X be a normal random variable with mean (mu) = 104.428 and standard deviation (sigma) = 3.001, find the value x such that P(X>x)= 0.4745.

- ○ -0.06
- ◉ 0.06   → Z-Score
- ○ 104.248
- ○ The correct answer is not provided.
- ○ 104.608
- ○ 100.811

Screen clipping taken: 3/5/2025 8:41 AM

*(handwritten annotations:)*

.5255

.4745

$$Z = \frac{X - \mu}{\sigma} \rightarrow .06 = \frac{X - 104.428}{3.001}$$

.06
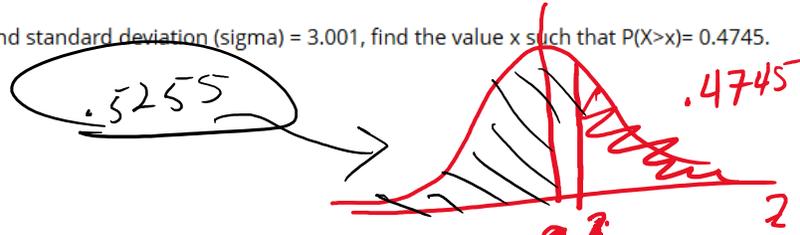

$$X = .06(3.001) + 104.428$$

$$= 104.608 \ 06$$

QUESTION 9

Let X be a normal random variable with mean (mu) = 52.915 and standard deviation (sigma) = 1.553, find P(49.437<X<52.966).

○ 0.511966

○ 0.499421 ✓

○ The correct answer is not provided.

○ 0.500579

○ 0.366303

○ 0.012545

Screen clipping taken: 3/5/2025 8:56 AM
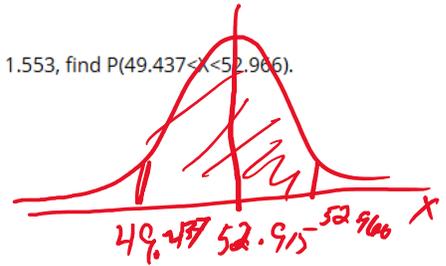

$$P(49.437 < X < 52.966)$$

$$= \Phi\left(\frac{52.966 - 52.915}{1.553}\right) - \Phi\left(\frac{49.437 - 52.915}{1.553}\right)$$

$$= \Phi(.03) - \Phi(-2.24)$$

$$= .511967 - .012545$$

$$= 0.499422$$
